

Our AR Frequency Extender Stands Alone!

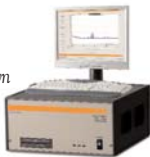

The versatile, high-speed CER2018 Receiving System – along with the CFE2040 Frequency Extender – breaks down barriers and goes beyond what any receiver has done before.

The main receiver provides continuous coverage of the 20 Hz to 18 GHz spectrum with real-time broadband calibration and remote control by Ethernet, GPIB and TILE! or DARE!! interfaces. Add the Frequency Extender and you can reach the 18 GHz to 40 GHz range working up to 30m from the main chassis with no cable loss concern. Cost-effective upgrades are available that enable you to work up to 150m from the main system at frequencies to 110 GHz.

Like all AR products, the Receiving System is backed by the strongest, most comprehensive warranty in the industry, and a global support network that's second to none.

For technical support: call 800-933-8181 or visit ar-worldwide.com
